## NEW GRINDER 100/15 WITH SPECIAL CONTROL BOX

This model is an upgrade to the standard Grinder 100. (The Grinder 100 is still available and is now known as the Grinder 100/11.)

The upgrade (Grinder 100/15) has an additional control box which includes a special starting capacitor (shown opposite).

This starting capacitor enables a much stronger starting torque to the cutting system, meaning that it is ideal for applications where there is a large volume of material to be chopped up.
